SUMMARY

AI Automation Specialist, Systems Architect, and Business Operator with hands-on experience designing and deploying AI-assisted development environments, agentic workflows, automation pipelines, business applications, and MCP-integrated tooling.

Experienced in building production-grade systems using prompt-driven development methodologies, local and cloud-hosted LLMs, Docker infrastructure, workflow automation platforms, APIs, webhooks, and custom orchestration frameworks. Proven ability to rapidly prototype functional solutions, integrate multiple systems, automate complex workflows, and translate business requirements into working software.

Combines strong technical problem-solving ability with a Bachelor of Accounting Science and extensive operational leadership experience. Comfortable working independently, learning new technologies quickly, and building practical solutions in rapidly evolving AI-first environments.

EDUCATION

Bachelor of Accounting Science (BCompt)

EXPERIENCE

Owner & Systems Architect

2017 – Present

Seagulls Pub & Grill

- Built and deployed custom business applications, automation systems, and AI-assisted operational tools.
- Designed payroll automation and reporting systems.
- Developed POS infrastructure supporting daily operations.
- Implemented AI tooling and workflow automation to improve operational efficiency.
- Managed business operations, financial reporting, procurement, staffing, and compliance.

PROJECTS

AI Security Automation Platform | Designed and deployed an AI-assisted security testing platform integrating Hermes AI agents, Model Context Protocol (MCP) tooling, Caido Web Proxy, and multiple bug bounty platforms into a unified automation environment.

- Integrated 64+ MCP tools enabling prompt-driven security testing through natural language interaction.
- Connected Caido GraphQL APIs, Intigriti, YesWeHack, and Code4rena platforms into a unified workflow.
- Built modular automation pipelines covering reconnaissance, vulnerability discovery, proof-of-concept generation, and reporting.
- Designed reusable AI-driven workflows capable of orchestrating complex testing tasks through conversational commands.
- Resolved authentication, configuration, networking, and cross-platform deployment challenges across Windows and Linux environments.
- Technologies: MCP, Python, Go, GraphQL, Docker, APIs, Webhooks, Hermes, Caido

AI Agent Platform & MCP Ecosystem | Architected a self-managed AI agent platform inspired by modern AI-assisted development environments, incorporating memory systems, skill libraries, MCP servers, tool orchestration, asynchronous task execution, and context management.

- Built 28+ reusable AI skill modules with conditional activation and context-aware loading.
- Developed 6 MCP servers exposing 40+ tools for browser automation, security tooling, API interaction, and workflow execution.

- Implemented asynchronous agent delegation and context-compression pipelines for long-running workflows.
- Built persistent memory architecture supporting vector search, knowledge retrieval, and session continuity.
- Created custom guardrails, validation systems, and automated workflow controls.
- Technologies: Python, MCP, Ollama, Docker, Linux, APIs, Vector Search

Seagulls Payroll Management Platform | Designed and developed a full-stack payroll management platform for South African SMEs.

- Employee onboarding and document management.
- Automated payroll calculations using South African tax regulations.
- UIF, SDL, EMP201, IRP5 and statutory compliance reporting.
- Employee self-service portal.
- PDF payslip generation and WhatsApp delivery.
- Payroll reporting and analytics.
- Technologies: Django 4.2, PostgreSQL, Python, WhatsApp Integration

Seagulls Point-of-Sale Platform | Built a comprehensive restaurant management and POS solution supporting end-to-end operational workflows.

- Product, inventory, purchasing and supplier management.
- Reservation and table management.
- Kitchen Display System integration.
- Multi-tender payment handling.
- VAT reporting and compliance.
- Shared deployment architecture with payroll platform.
- Technologies: Django 4.2, PostgreSQL, Python

N8N AI Automation Workflows | Built self-hosted automation systems combining local LLM inference, API orchestration, workflow automation, and scheduled intelligence gathering.

- Developed automated bug bounty reconnaissance workflows using CRT.sh and HackerTarget APIs.
- Built AI-powered attack surface analysis using Ollama-hosted local models.
- Created automated daily threat-intelligence aggregation and summarisation pipelines.
- Designed fault-tolerant workflows with validation, branching logic, and structured outputs.
- Delivered fully local AI processing with zero cloud inference costs.
- Technologies: n8n, Ollama, REST APIs, JavaScript, SQLite
