

Cameron James Weyers

Bredasdorp, Western Cape, South Africa | cameronweyers@gmail.com | linkedin.com/in/cameron-weyers | github.com/kigansolutions

SUMMARY

AI Systems Builder and founder of Kigan Agentic AI Solutions · designing and shipping custom AI agents that automate real business workflows, from content drafting to reporting to day-to-day operations. Built from the operating side, not the demo side.

Nine years as a business owner-operator, with a background in audit and accounting. Everything I build runs in production · I'm my own harshest client, and every system is judged by what it costs when it breaks, not how it looks in a slide.

EXPERIENCE

Founder & AI Systems Builder

2024 · Present Kigan Agentic AI Solutions · Remote

- Design and build custom AI agents that automate content, research, and workflow tasks for clients · Claude Agent SDK, Trigger.dev, n8n, and direct API integrations.
- Shipped a weekly LinkedIn content agent and a full research-to-send newsletter pipeline, both running unattended in production.
- Adapted Nous Research's open agent framework into Hermes, a self-hosted platform running six MCP servers, 40+ tools, and daily automated briefings.
- Self-taught, in public: two years from spreadsheet automation to a full agentic platform, every build shipped to production, not demoed.

Owner & Systems Architect

2017 · Present Seagulls Pub & Grill · Bredasdorp, South Africa

- Built and deployed custom business applications, automation systems, and AI-assisted operational tools.
- Designed SARS-compliant payroll automation and reporting systems, still running production payroll monthly.
- Managed business operations, financial reporting, procurement, staffing, and compliance for nine years on thin hospitality margins.

PROJECTS

LinkedIn Drafting Agent

Weekly agent that researches live discussion, drafts a post in my voice using the Claude Agent SDK, and files it to ClickUp for review · unattended, every Monday. Built for Kigan.

- Sources live discussion via web search rather than relying on stale training data · Reddit blocks direct API access.
- Drafts in a consistent voice using a detailed style system prompt, deduplicated against prior topics.
- Hands off to a human review step via ClickUp · never auto-publishes.

Technologies: Claude Agent SDK, Trigger.dev, ClickUp API

Newsletter Automation

Research-to-send pipeline: sourcing, branded copy, charts and AI imagery, HTML build, Gmail draft · no manual step in between. Runs Kigan's own newsletter.

- Fully automated content pipeline from research through branded, ready-to-send HTML email.
- Generates supporting charts and AI imagery matched to brand guidelines.
- Delivers directly to a Gmail draft for final review before send.

Technologies: Python, OpenRouter, Gmail API

Hermes · AI Agent Platform (Adapted)

Adapted Nous Research's open agent framework into a self-hosted, production-grade platform · Ubuntu VM, Tailscale-only, local LLM inference via Ollama. Infrastructure I live on, not a portfolio piece.

- Built 28+ reusable AI skill modules with conditional activation and context-aware loading.
- Developed 6 MCP servers exposing 40+ tools for browser automation, API interaction, and workflow execution.
- Built persistent memory architecture supporting vector search and session continuity, integrated with Gmail and Calendar.

Technologies: Python, MCP, Ollama, LangGraph, CrewAI, Chroma/Qdrant, Tailscale, Linux

Seagulls Payroll Management Platform

Designed and developed a full-stack payroll management platform for South African SMEs. SARS-compliant · PAYE, UIF, SDL, EMP201, IRP5.

- Automated payroll calculations using South African tax regulations · PAYE, UIF, SDL.
- Statutory compliance reporting: EMP201, IRP5.
- Employee self-service portal with PDF payslip generation and WhatsApp delivery.

Technologies: Django 4.2, PostgreSQL, Python, WhatsApp Integration

n8n AI Automation Workflows

Built self-hosted automation systems combining local LLM inference, API orchestration, workflow automation, and scheduled intelligence gathering. Fully local AI processing with zero cloud inference costs.

- Built AI-powered data analysis and summarisation pipelines using Ollama-hosted local models.
- Designed fault-tolerant workflows with validation, branching logic, and structured outputs.
- Wired local LLMs into Gmail, Sheets, and external APIs · manual daily admin replaced by triggers.

Technologies: n8n, Ollama, REST APIs, JavaScript

THE ARC

2024 · now

Founder & AI Systems Builder

Kigan Agentic AI Solutions

Self-taught, in public, on live systems. Two years from spreadsheet automation to a full agentic platform.

2017 · now

Owner

Seagulls Pub & Grill · Bredasdorp, South Africa

Nine years on thin margins. Every system shipped is filtered through what it costs when it fails at 19:00 on a Friday.

2009 · 2017

Senior Sous Chef · Head Chef · Chef Patron

Stoke Place (3 AA Rosettes) · Macdonald Bear (2 AA Rosettes) · The Sun Inn · UK

Eight years of high-velocity systems under pressure: zero tolerance for anything that doesn't work when it has to.

2004 · 2007

Audit & Article Clerk

Luyt Proudfoot Hall & Associates · South Africa

Where the habit started: build to the number, not the demo.

TECHNICAL SKILLS

Agentic AI

Claude Code · Prompt-Driven Development · Hermes (Nous Research, adapted) · LangGraph · CrewAI · MCP · Multi-Agent Architectures · LLM Orchestration

LLM Runtime

Ollama · OpenRouter · Local LLM Deployments · RunPod

Automation & Integration

n8n (Self-Hosted) · Make.com · REST APIs · Webhooks · Workflow Automation · Scheduled Automation · Data Pipelines

Development

Python · Django · PostgreSQL · Linux · Git & GitHub

Memory & Data

Chroma · Qdrant · SQLite · Vector Embeddings · Vector Search

Infrastructure

Ubuntu 24 LTS · Tailscale · Virtual Machines · YAML Configuration

CONTINUOUS PROFESSIONAL DEVELOPMENT

AI Automation & Agentic Systems · Prompt Engineering · Claude Code Ecosystem · MCP Architecture · Workflow Automation · API Design & Integration · Business Systems Architecture
